As part of the Study Club meeting, it is recommended that you start the meeting with a literature review. The purpose of the literature review is to allow discussion and collaboration of the club members and enhance knowledge in the dental field.

For this months literature review, there are links to two different research articles on the effects of chlorhexidine on bond strengths. The following papers should be assigned to two different members of the study club whose responsibility will be to read, digest and present a summary of that paper to discuss with the remaining club members. You are welcome to post the link to the papers on the cerecdoctors.com message forum if you wish to foster further discussion.

**Research Topic #1**

**Chlorhexidine Preserves Dentin Bond *in vitro***

[http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2248723/](http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2248723/)

**Research Topic #2**

**Long-term bonding effectiveness of simplified etch-and-rinse adhesives to dentin after different surface pre-treatments**

[http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3740652/](http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3740652/)
